Vol-II 4 18

$$V = LWh \div \frac{1000 R^3}{\text{方}}$$

一得術答欲今  
百五曰曰以有  
萬千置一千溝  
尺尺廣千尺廣  
以又一方作十  
一以十丈丈  
千長丈。深  
除二十以五  
之丈深丈  
即得乘之乘  
得之得之  
二十丈。

Now we have a ditch, of width ten 丈, depth five 丈, and length twenty 丈. We wish to count a thousand  $R$  as one block. We ask: how many resulteth?

Answer saith: one thousand blocks.

Method saith: put down the width, one ~~thous~~ ten 丈. Multiplying it by the depth, five 丈, resulteth in five thousand  $R$ . Also multiplying it by the length, twenty 丈, resulteth in one million 尺. Dividing it by one thousand, we are done.
