Now there be grain, two thousand, three hundred and seventy-four 斛, and for each 斛 we add three 升.
We ask: how much grain be there altogether?

Answer saith: two thousand, four hundred and forty-five 斛, two 斗 and two 升.

Method saith: put down the grain, two thousand, three hundred and seventy-four 斛. Multiplying it by one 斛 three 升, we are done.

得。四斛，以一斛二

術曰：置二升，以一斛二升。二千三百四十五

答曰：二千三百四十五斛二斗四升。問共粟幾斛何？

今有粟二千三百七十四斛，問共粟幾斛何？ 四

$$2374\ 斛 \times \frac{1.03\ 斛}{斛} = 2445.22\ 斛$$
